UC Berkeley STAT 222 Master's Capstone, Spring 2016

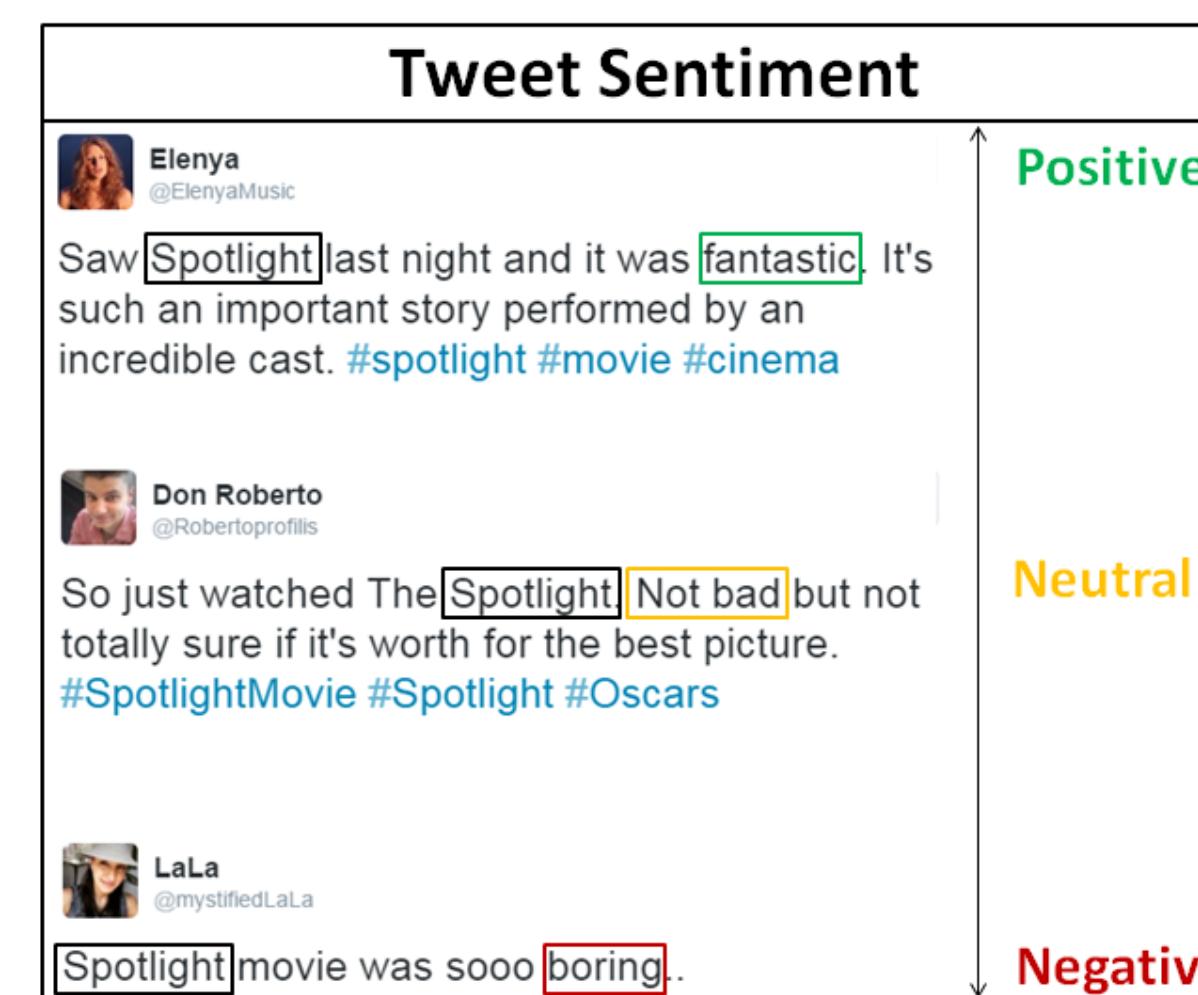

ABSTRACT

The "twittersphere" provides a vast trove of textual information, which can be mined to determine consumers' opinions on a wide array of topics. With the Oscars looming, we set out to answer the question: **What is the relationship between the sentiment and number of tweets about the 2016 Oscar's best picture nominees and their commercial or critical success?** We found that there exists a negative association between the average positivity of tweets and commercial success, and a positive association between the average positivity of tweets and critical success. In addition, among the tweets we analyzed, we found that more people tweeted about movies which had more success at the box office, but fewer people tweeted about those movies which were favorites amongst critics.

Based on our analysis, who do you think the award will go to?

EVALUATING SENTIMENT

Search and Streaming API: 64,064 tweets January 29 – February 3, 2016

CONCLUSION

- Despite the common perception that critics and moviegoers have differing opinions on popular movies, our analysis suggests the contrary for the eight Best Picture Nominees: moviegoers' and critics actually tend to agree.
- Positive tweets about *The Revenant* are focused on the main actor, rather than about the movie itself as with positive tweets about *Spotlight*. *The Revenant* also has much more negative words within its negative tweets than does *Spotlight*, showing a split in sentiment intensity.
- Although box office success does seem to trend with higher numbers of mention on Twitter, a higher proportion of positive tweets does not. Although box office success does seem to trend with higher numbers of mention on Twitter, it does not guarantee a higher proportion of positive tweets. This can possibly be explained by the fact that viewers must first spend money at the box office in order to form an opinion, whether positive or negative.
- Spotlight won Best Picture on 2/28/2016. Our analysis suggested this was a likely winner.**

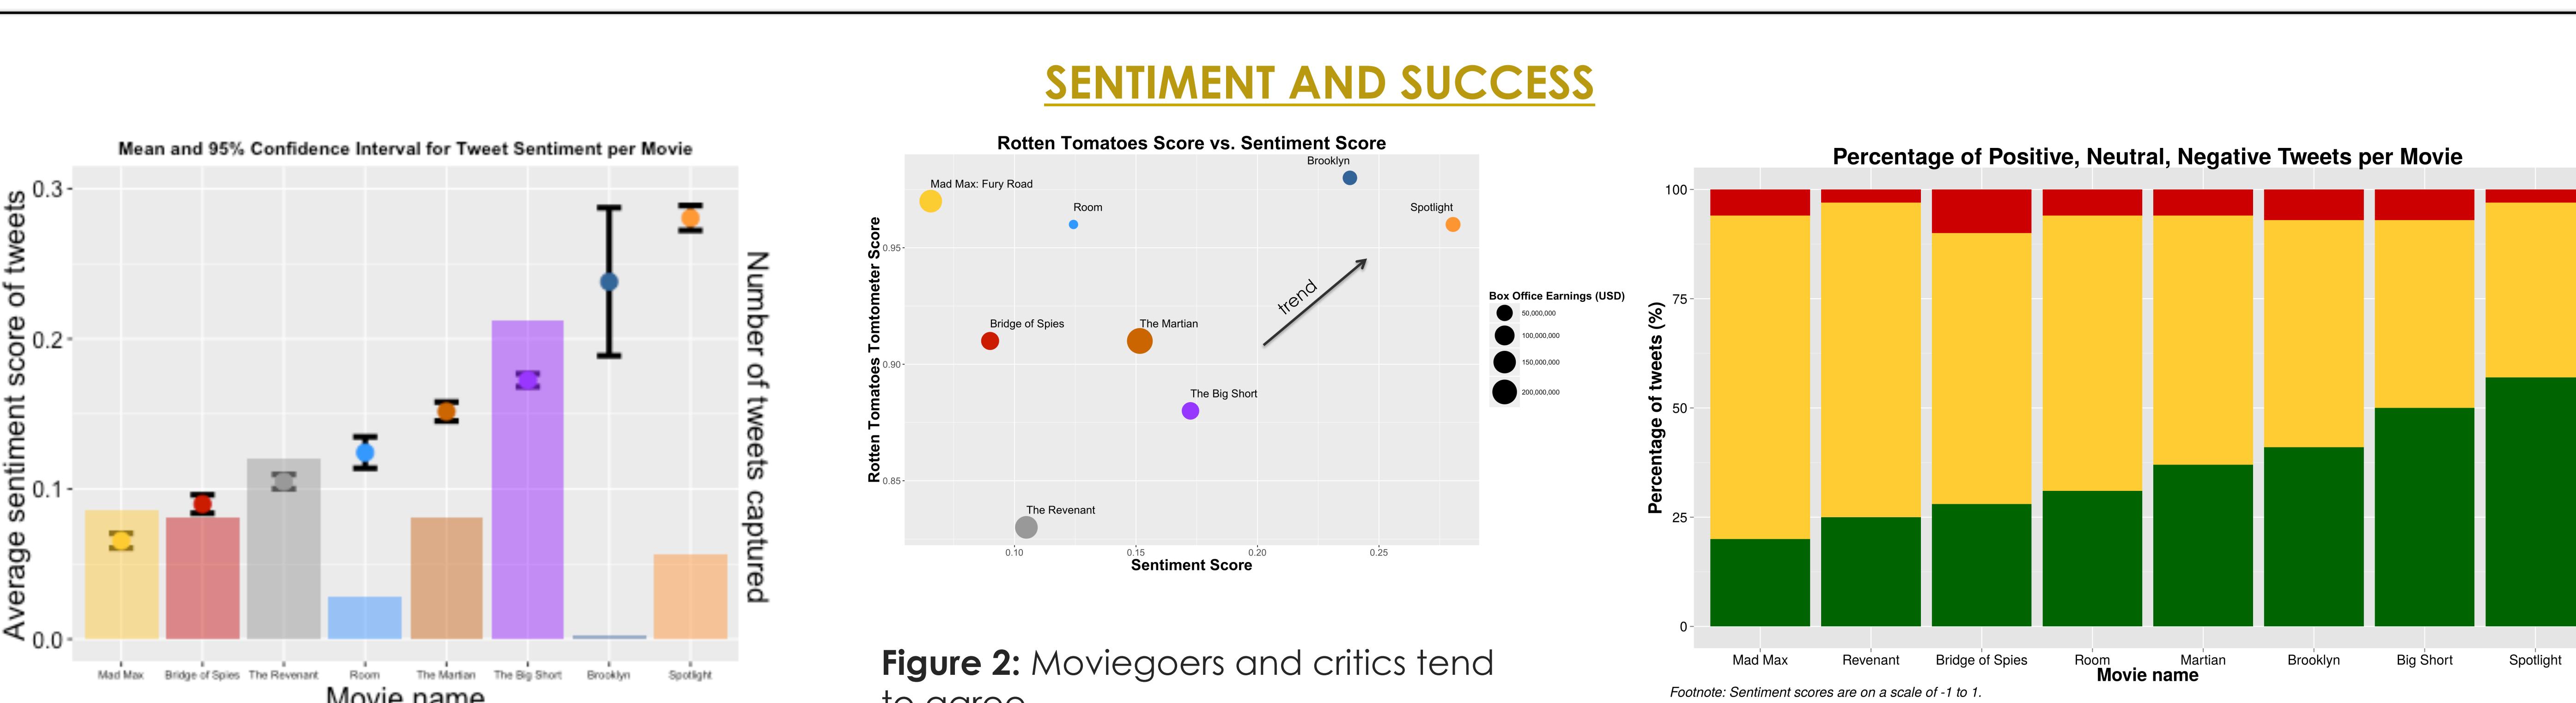

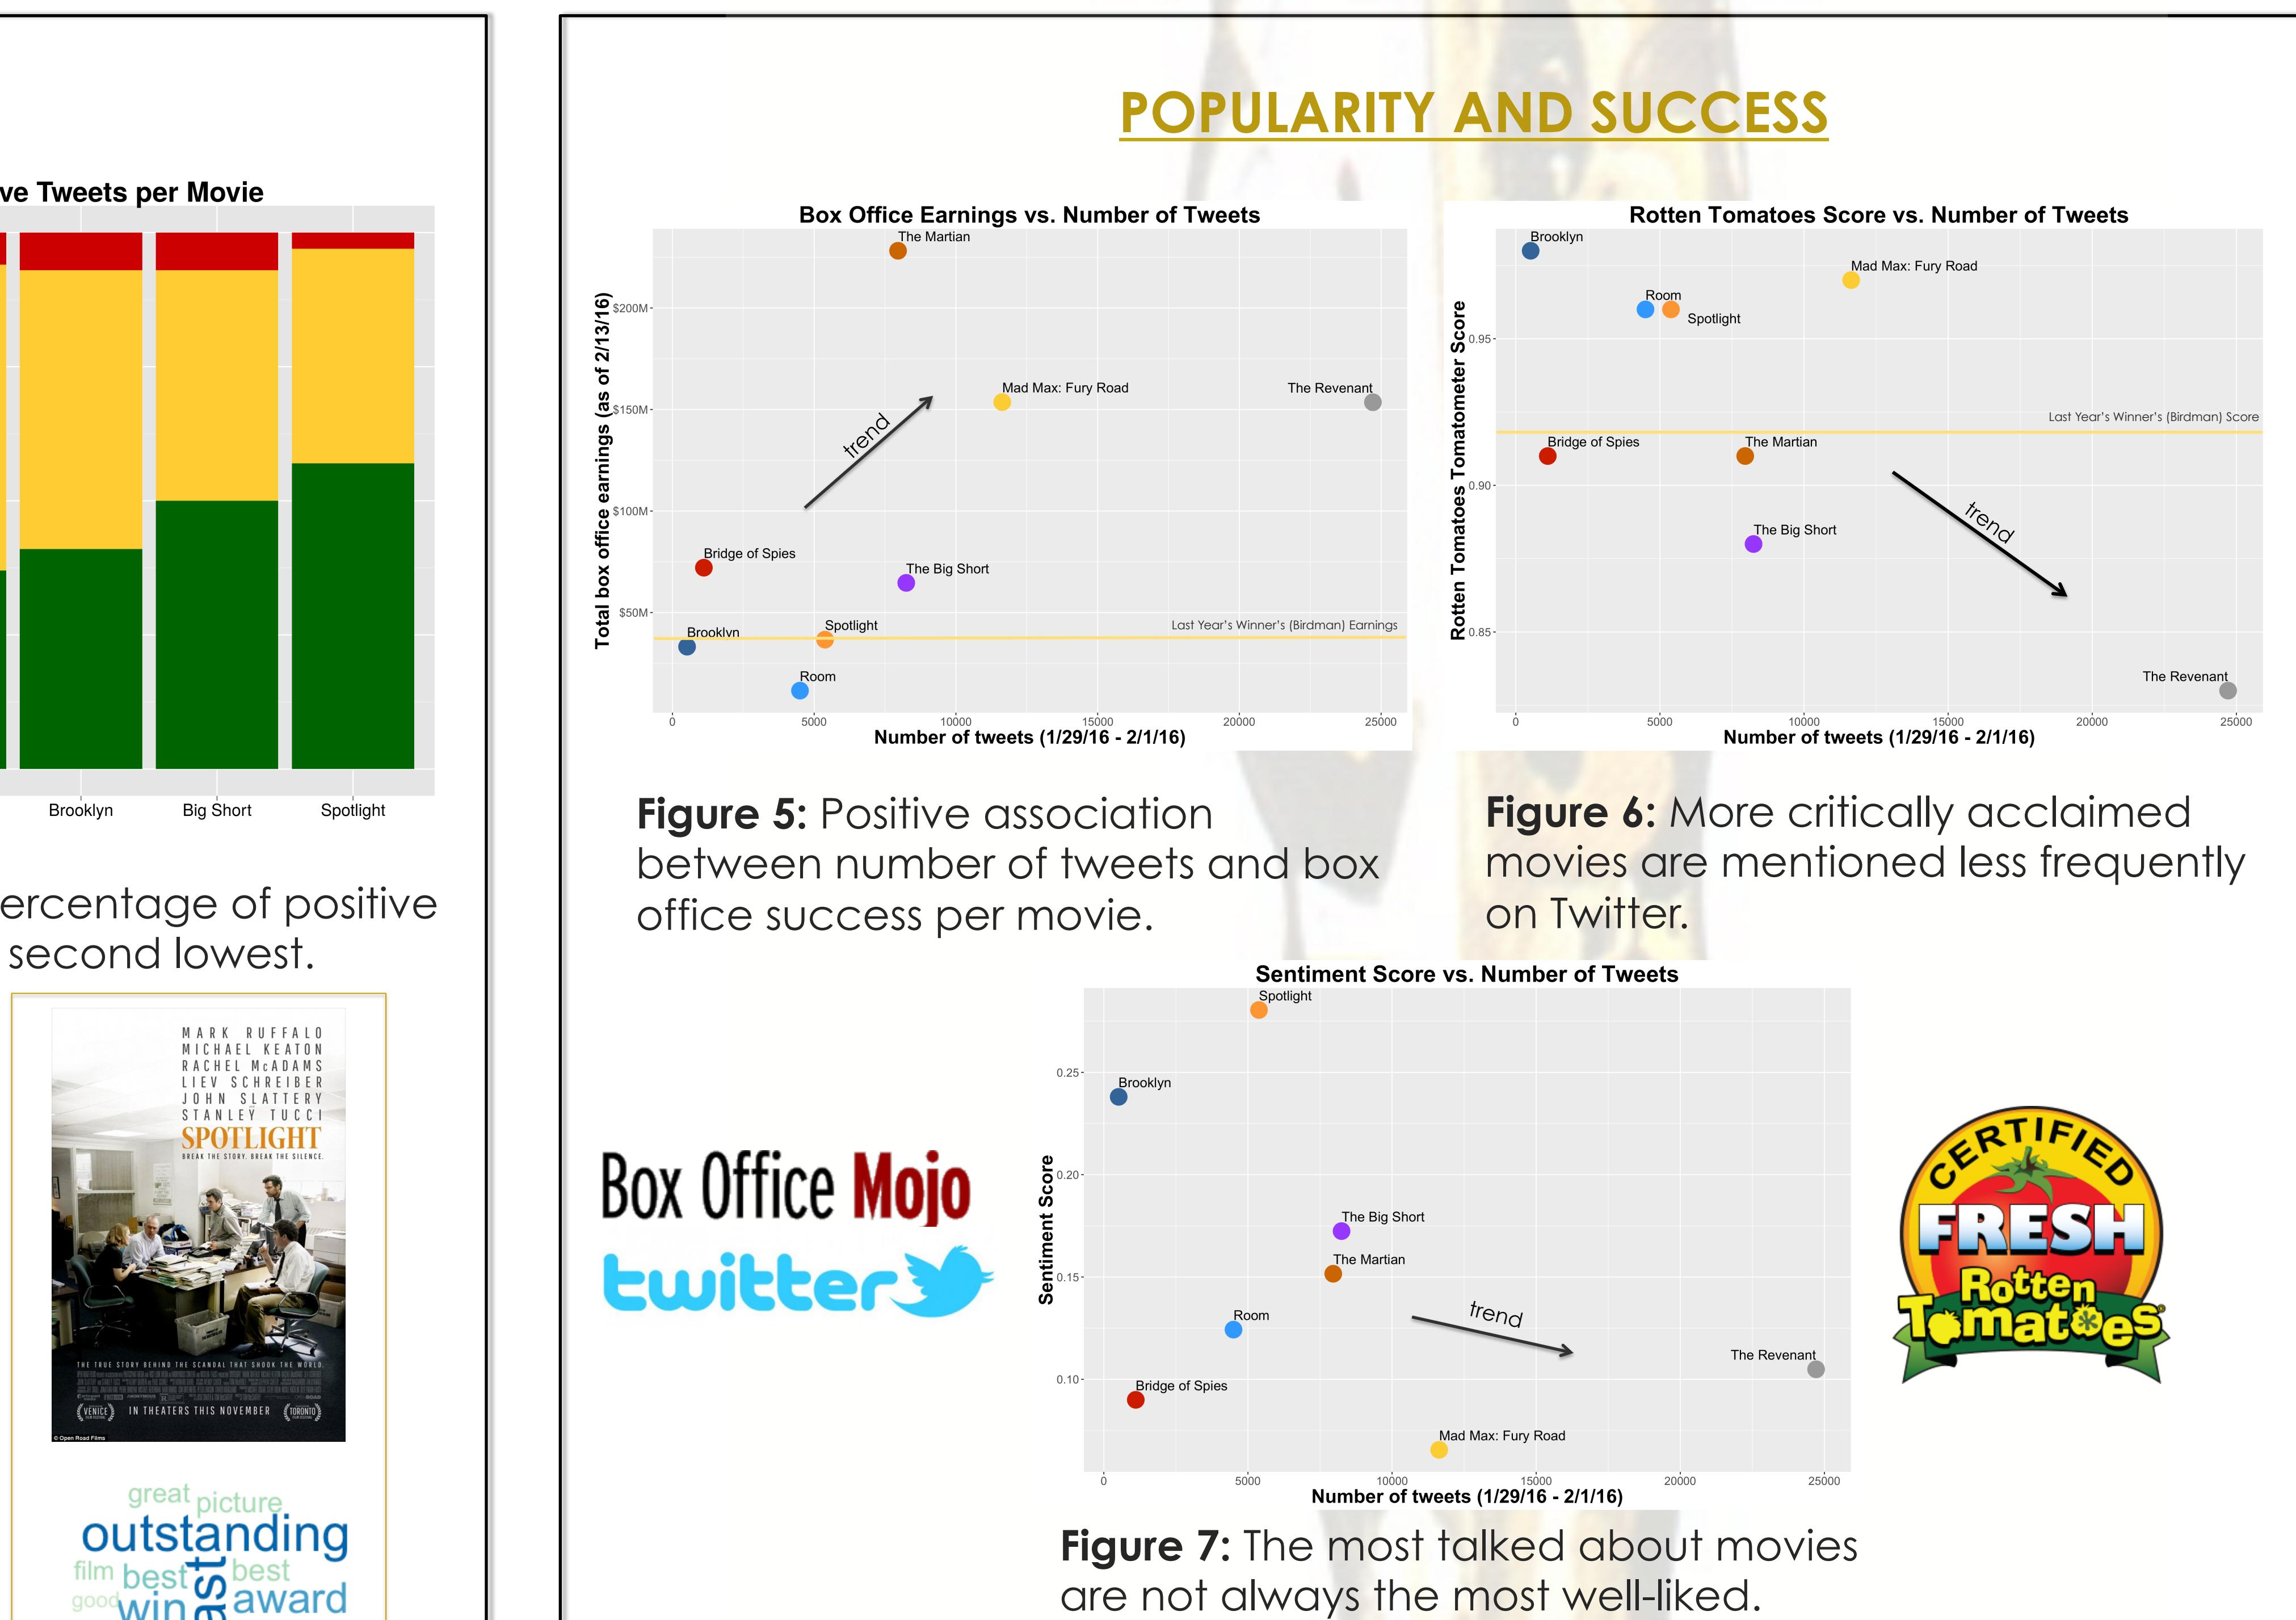

Figure 1: Mean and 95% confidence interval of average sentiment per movie. The large CI around *Brooklyn* is explained by the low number of tweets.

The Revenant		Spotlight	
Positive	Negative	Positive	Negative
actor	difficult	cast	people
wins	films	outstanding	ordinary
male	put	motion	explains
leading	leo	sag	speaks
best	saw	award	courage
congrats	long	receives	empowering
win	oscar	best	years
great	mad	wins	movie
saw	never	winning	behind
good	crazy	ensemble	film

Table 1: Top 10 frequent words in both positive and negative tweets.
